Dimensions

2.125" String Spacing

The Archtop Guitar Pickup is suitable for most instruments with a distance of 2.914 inch (74.01 mm) between adjustable bridge posts (center to center).

Bridge radius is 12 inches.

Plugging In

An impedance matching preamp is recommended, but not required. This will help realize the full frequency response potential of the pickup and allow for cable runs longer than 10 feet without signal deterioration. Use a high quality, low capacitance 1/4 inch shielded instrument cable. This will ensure minimal tone coloration and hum.
