**USER GUIDE  
INK PLUS ONBOARD PREAMP**

# INK Plus Quick Start

---

- 1. Set the controls** • Turn **volume** and **notch** off. Set the **bass, middle, treble** and **brilliance** controls to center.
- 2. Plug in** • Connect INK Plus to an amplifier or PA with a ¼-inch instrument cable. The battery light will flash once quickly to indicate it has switched on.
- 3. Turn up** • Raise the **volume** and adjust the **bass, middle, treble** and **brilliance** controls to your liking.

# INK Plus Controls

---

**Volume** • For the cleanest signal, set the **volume** knob as high as possible, without causing distortion or feedback.

**Bass** • Boost here to add depth and weight to the sound of the guitar.

**Middle** • Turn the **middle** knob all the way left for a smooth “scooped out” tone at high volume levels. Raise the **middle** knob to the right of center to add midrange “bite” to the sound.

**Treble** • Boost to cut through the mix. Cut to mellow and subdue the sound.

**Brilliance** • This control can add shimmer and sparkle to your sound. It zeros in on crisp high frequency tones, the realm of harmonics and acoustic string sound. Lower the **brilliance** control to reduce finger noise and fret buzz.

**Notch** • Tune the **notch** filter to remove low-end feedback. Raise the **volume** until feedback occurs, then slowly turn the **notch** to the right until the feedback is eliminated.

**Phase** • Use the **phase** switch to improve bass response at low volume and suppress feedback at high volume.

**Tuner** • Press and hold the right side of the tuner display to activate the onboard tuner; press once to turn it off. This digital chromatic tuner accommodates all standard and alternate tunings and mutes the output when engaged. It is calibrated to A = 440 Hz and can be activated without an instrument cable connected. To conserve battery life, the tuner will turn itself off after three minutes of inactivity.

**Battery** • When it is time to change the battery, a low battery indicator will light. To conserve power, unplug the instrument and turn off the tuner when not in use. Typical 9V alkaline battery life is approximately 80 hours (with tuner off).

On certain models, the low battery lights to indicate it is time to recharge the internal battery. Connect a micro USB cable and 5VDC, 500mA power source to the INK output box until the status LED indicates full charge.

# Sample EQ Settings

---

## Fingerstyle

This will add fullness to the bass and definition to the treble.

## “Scooped” Mid

This setting emphasizes extreme bass and treble

---

## Strummer

A good setting for strumming chords.

## Cut Through the Mix

When you need to be heard through a loud band.
